Stop guessing. Build with Techpigeon.

Techpigeon is a B2B software company bridging the gap between cutting-edge technology and strict enterprise governance.

Prepared to secure high-tier AWS Activate credits via Spendbase.

Focus

B2B SaaS & Enterprise AI

Infrastructure

Cloud Ready Architecture

Target Sectors

Finance, Healthcare, Enterprise, NGOs

Flagship Project

NovusSparks AI

Why this matters for AWS
High-compute validation, enterprise storage, and secure scaling make cloud infrastructure a core part of product delivery.

On average, enterprises waste months and millions trying to adopt AI safely.

The biggest roadblock to enterprise AI adoption isn't technology. It is trust.

Unverifiable outputs

AI hallucinations slow sign-off, increase rework, and erode leadership confidence.

Lack of provenance

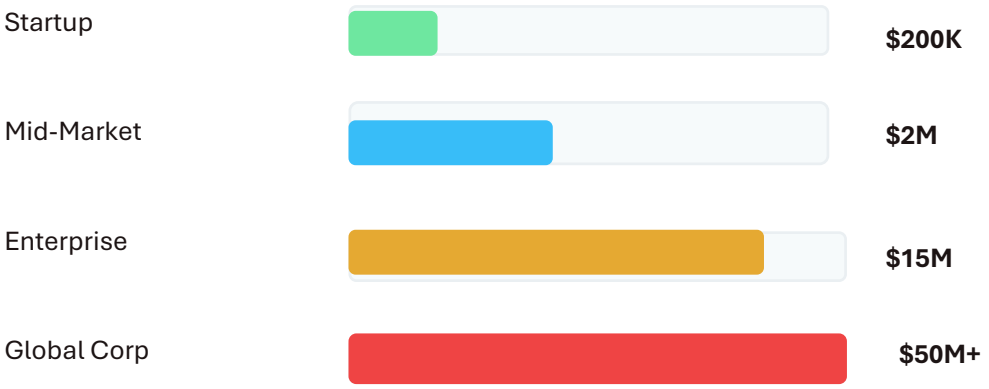
Without an audit trail, enterprise AI cannot pass procurement, governance, or compliance review.

Compliance risks

Privacy failures and undocumented model behavior expose teams to legal, financial, and reputational damage.

Cost of AI Failure

Illustrative downside by company size



Enterprise buyers need defensible AI before they scale usage. That is the wedge.

All your enterprise solutions in one governed ecosystem.

Techpigeon builds the secure infrastructure businesses need to adopt next-gen tools.

Secure Cloud Data Handling

Encrypted storage, structured ingestion, and controlled document flows.

Enterprise Command Center Controls

Centralized governance, policy enforcement, and workspace visibility.

Role-Based Access & Usage Tracking

Granular permissions, user attribution, and audit-ready history.

Tailored B2B SaaS Ecosystems

Vertical modules for finance, healthcare, enterprise teams, and NGOs.

Introducing our flagship product

NOVUS SPARKS

The enterprise AI suite that turns high-compute validation into an auditable business workflow.

Benefit from hallucination-free AI with NovusSparks.

An enterprise business intelligence suite combining strategy generation, integrity review, and AI-pattern detection in one governed workflow.

S

Strategy Engine

Generates actionable strategies from natural language and documents.

Governed output

R

Semantic RAG (Cortex)

Anchors outputs to secure knowledge bases and verified enterprise context.

Governed output

C

Consensus Protocol

Queries multiple models and cross-checks reasoning before release.

Governed output

E

Evidence Ledger

Captures traceable evidence for conclusions, scores, and exports.

Governed output

Trust your AI. Verify every step.

We cross-validate outputs across the best AI engines available.

1

Prompt

Natural language or documents

2

Orchestrate

Consensus Engine queries multiple models

3

Validate

RGS layer checks facts against secure data

4

Deploy

Receive accurate, scored strategies

Outcome Every output can be traced to its prompt, supporting evidence, consensus path, and final confidence score.

Engineered for the strictest compliance standards.

Ensure your entire AI workflow stays governed from prompt to PDF.

- Exportable PDF and PPTX audit summaries for enterprise review.
-
- Source-verification visibility so teams can inspect every evidence path.
-
- Profile-versioned review scoring across teams, iterations, and workspaces.

Designed to clear procurement, governance, and security objections faster.

Trust Center

PDF

Evidence Ledger

Confidence Score **94%**

Sources Verified **12/12**

Compliance **PASS**

Tailored AI capabilities to accelerate your sector's hardest challenges.

A shared governed core with vertical workflows for high-value use cases.

NOVUS SPARKS

Financial Services

Automate risk and compliance workflows with evidence-backed outputs.

Enterprise-ready

Healthcare

Synthesize medical literature and internal guidance into reviewable recommendations.

Enterprise-ready

Enterprise Ops

Stand up custom isolated knowledge bases for secure cross-functional execution.

Enterprise-ready

Non-Profits & NGOs

Accelerate donor analysis, grant writing, and impact reporting with source traceability.

Enterprise-ready

Simple, transparent pricing. The software that pays for itself.

Land teams with clear value, then scale into governed enterprise workspaces.

Basic

Free

- Idea Cooking
- Canvas generation
- 3 exports

POPULAR

Pro

$20 / month

- 50 review credits
- Evidence-backed workspace
- NGO module

Choose Pro

Enterprise

$50 / month / user

- Unlimited exports
- Custom branding
- Workspace auditability

Get Started

All plans include Consensus Protocol validation, Evidence Ledger, and export audit trails.

From initial prompt to enterprise-wide scaling.

This is the compute profile AWS can help us unlock as we move through Spendbase.

Phase 1

Natural language prompting

Phase 2

Multi-step business workflows

Phase 3

Secure, isolated enterprise deployments

Phase 4

Massive cross-department scaling

The AWS Ask

Scaling NovusSparks' multi-engine validation and semantic RAG requires immense, reliable compute power. Through Spendbase, we are seeking AWS Activate credits to support GPU inference, retrieval infrastructure, and secure document storage as we onboard our enterprise waitlist.

Use of credits: model validation workloads, vector retrieval, export pipelines, and storage isolation for enterprise pilots.

Ready to Make Smarter Decisions?

Join forward-thinking teams using Techpigeon's multi-engine AI consensus to validate ideas, build strategies, and ship with confidence.
